Technologies

Languages: C++, C, Java, Python, JavaScript

AI/ML: Machine Learning, Deep Learning, LLM Fine-Tuning (QLoRA)

Frameworks & Tools: Git, GitHub Actions (CI/CD), Docker, REST APIs, FastAPI, Node.js, Express.js

Databases: SQL, PL/SQL, MongoDB

Front-End Development: React.js, Tailwind CSS, Angular (Basic)

Development Environments: Windows, AWS (SageMaker, EC2, S3)

Software Engineering: Software Development Lifecycle (SDLC), Debugging & Root Cause Analysis, Unit Testing & Validation, Code Review, Technical Documentation

Education

Aditya Engineering College

Aug 2023 – Present

B.Tech in Artificial Intelligence and Machine Learning

- CGPA: 7.85

Projects

Priya — AI Admission Calling Agent (Python, LLaMA 3.1, FastAPI, Twilio, Sarvam AI) [GitHub](#) [🔗](#)

May 2025

- Fine-tuned LLaMA 3.1 8B using QLoRA on AWS SageMaker (T4 GPU); followed full software development lifecycle from design and implementation to testing, debugging, and deployment.
- Built a goal-based 12-step conversation flow controller with RAG pipeline (university brochures as knowledge base) to deliver context-aware, convincing responses; validated system behavior through iterative testing and root cause analysis of edge-case failures.
- Integrated Twilio Voice API for outbound calling, Sarvam AI for multilingual STT and TTS supporting Telugu, Hindi, and English with automatic language detection.
- Deployed as a FastAPI service with an admin dashboard (React) for triggering calls, monitoring live conversation progress, and tracking placement and scholarship data; maintained clean, well-structured code with version control via Git.

AI Code Analyzer (React, Gemini API)

Mar 2026

[Live Demo](#) [🔗](#)

- Designed and developed an AI-powered tool to analyze time complexity and detect security vulnerabilities; wrote clean, maintainable code following software quality and security best practices.
- Integrated Google Gemini API for automated code analysis with structured error handling and edge-case validation.
- Reduced code review time by **60%** and detected **95%** of common vulnerabilities across test suites.

TripNest (JavaScript, Google Maps API, Figma)

Jun 2024

[Live Demo](#) [🔗](#)

- Developed a travel planning web platform using JavaScript and Google Maps API; collaborated with team members through code reviews and version control (Git) to meet delivery milestones.

- Features include itinerary planning, nearby place discovery, and route optimization; debugged and resolved rendering and API integration issues throughout the development cycle.
- Improved travel planning efficiency by **40%**.

Experience

Full-Stack Development Trainee

Jun 2024 – Aug 2024

Technical Hub

- Worked with MERN stack (MongoDB, Express.js, React.js, Node.js) under guidance of senior engineers; assisted in the design, development, testing, and debugging of software components.
- Built and deployed full-stack applications with team collaboration; participated in code reviews, followed software quality processes, and maintained technical documentation for developed features.

Certifications

Oracle Java Foundations Associate

[Certificate](#) 

HackerRank SQL Certification: Basic, Intermediate

[Certificate](#) 

GitHub Foundations Certification

[Certificate](#) 

Achievements & Languages

English – Proficient Odia, Hindi – Upper Intermediate Telugu – Native

[CodeChef](#)  rated programmer with **450+** combined problem solves across [LeetCode](#)  and [GeeksforGeeks](#) .
